the tugboat/barge  
combination Caribbean  
Sea/The Resource with  
the amphibious passenger  
vehicle DUKW 34 on the

of the accident, two passengers on board DUKW 34 were fatally injured, and several other passengers sustained minor injuries. Damage to DUKW 34 totaled \$130,470. Damage to the barge was minimal; no repairs were made. Safety issues identified in this accident include vehicle maintenance, maintaining an effective lookout, use of cell phones by crewmembers on duty, and response to the emergency by Ride The Ducks International personnel. As a result of

this accident investigation, the National Transportation Safety Board makes safety recommendations to the U.S. Coast Guard, K-Sea Transportation Partners L.P., Ride The Ducks International, LLC, and The American Waterways Operators. *Safety in Towing* Skyhorse Publishing Inc. Although the CAS does not specify structural standards in excess of the provisions of other IMO conventions, codes and

recommendations, its requirements stipulate more stringent and transparent verification of the reported structural condition of the ship and that documentary and survey procedures have been properly carried out and completed. The Scheme requires that compliance with the CAS is assessed during the Enhanced Survey Program of Inspections concurrent with intermediate or renewal surveys currently required by resolution A.744(18), as amended.-- Publisher's description.

This booklet is designed

to assist shipyard owners and operators in complying with the numerous federal environmental regulations to which they are subject. The enclosed checklists are to be used by shipyards to monitor compliance with requirements in the areas of: - Air - Water - Hazardous waste Tanks - Community-right-to-know -Medical waste - PCB management - Pesticides -Waste minimization - Property transfers The checklists were designed by shipyard

environmental engineers and attorneys who are familiar with both shipyard operations and all of the applicable environmental regulations. The checklists do not contain complex legal language that is often pervasive in environmental regulations. Rather, the checklists are drafted in a straightforward and easy to understand manner targeted to the specific shipyard operation that the requirement is seeking to regulate. Generally, the checklists

ask yes or no questions and provide areas for comment or other relevant information. While the checklists are designed to assist shipyards in determining the yard's compliance with environmental regulations, use of the checklists will not assure compliance with all environmental regulations. The checklists primary focuses are on compliance with federal regulations. Where appropriate, however, the checklists indicate when it is necessary for the

auditor to consult relevant state regulations. Thus, the checklists are meant to serve as guidelines that highlight the compliance issue and direct the auditor to the appropriate regulation if the auditor desires more information. As a result of this structure, shipyards are encouraged to tailor the checklists to meet their unique operational needs. Because audit reports that document potential compliance problems can become a two-edged sword, shipyards must wisely use the information

obtained and be prepared to address and resolve areas of concern.

The Law Library presents the complete text of the Inspection of Towing Vessels (US Coast Guard Regulation) (USCG) (2018 Edition). Updated as of May 29, 2018 The Coast Guard is establishing safety regulations governing the inspection, standards, and safety management systems of towing vessels. We are

taking this action because the Coast Guard and Maritime Transportation Act of 2004 reclassified towing vessels as vessels subject to inspection and authorized the Secretary of the Department of Homeland Security to establish requirements for a safety management system appropriate for the characteristics, methods of operation, and nature of service of towing vessels. This rule, which includes provisions covering specific electrical and machinery requirements for new and

existing towing vessels, the use and approval of third-party organizations, and procedures for obtaining Certificates of Inspection, will become effective July 20, 2016. However, certain existing towing vessels subject to this rule will have an additional 2 years before having to comply with most of its requirements. This ebook contains: - The complete text of the Inspection of Towing Vessels (US Coast Guard Regulation) (USCG) (2018 Edition) - A dynamic table of content linking to each

section - A table of contents in introduction presenting a general overview of the structure [Navigation and Vessel Inspection Circular](#) Whether out for an afternoon's sail or embarking on a long offshore passage, there is always an element of chance and uncertainty about being at sea. To be responsible for the wellbeing of both crew and vessel, a good skipper needs to know their limitations and ensure they are operating well within the margins of

safety. Safe Skipper is a practical and thought provoking guide for yacht skippers of all levels of experience, full of invaluable advice and tips on how to reduce to the minimum the risks of mishaps and equipment failure at sea. There's a wide range of information on seamanship, preparation, seaworthiness, gear, boat handling, leadership, teamwork, watch keeping, communications, navigation, weather and emergency procedures, all delivered in a highly

practical, lively, non-preachy fashion. Included throughout are useful checklists, box-outs and case studies of accidents and their causes, with survivors' testimonials and explanations of how disasters were avoided, or could have been, all of which provides valuable lessons for everyone who goes to sea.
