- A thrilling photographic account of the treasure trove of cars kept by the Mercedes-Benz Museum in Stuttgart that are not currently on display to the public The Mercedes-Benz Museum in Stuttgart is one of the largest and most visited industrial museums in the world. But the 160 or so automobiles on display are only a small part of the shiny chrome treasures that form the Mercedes-Benz Classic vehicle collection. Another 1,000 historical models are 'parked' in secret places outside Stuttgart - these secret places are called the 'Holy Halls'. This collection is the treasure trove of the brand. It has existed since 1923 and offers a comprehensive overview of the model history of Mercedes-Benz. Cars with special technology and equipment are stored here, as are the silver arrows of Caracciola, Lang and Fangio, the Pope's carriages, the state cars of the young Federal Republic of Germany or Mercedes models that became collectors' items due to their prominent previous owners. Some of these exhibits are well protected and waiting in special wooden boxes for their next use at exhibitions, fairs, events or classic car races. Others stand next to each other as silent witnesses of the past. Each time a model is modified, the collection is extended by the last vehicle of the discontinued series, which experts believe will be one of tomorrow's classic cars. The 'Holy Halls' are not open to the public; enquiries from editorial offices and TV teams have often been rejected. But, during the years 2016 to 2018, almost all the vehicles of the Mercedes collection were photographed. Thus, a unique photographic collection was created, the automobile history from more than ten decades; many of the previously unpublished photographs are exclusively available here in this book. In addition, Mercedes-Benz Classic agreed to open the 'Holy Halls' for an external photo team and provide information about the car models stored there. For the first time, it has been possible to produce a fascinating illustrated book with panoramic and detailed shots from the 'halls', and lively photo reports on cars that tell stories - from the first Benz batting motor car to the latest Formula 1 racing car. Equally thrilling are the stories of the unique specimens and prototypes that are stored in the 'Holy Halls': Mercedes models that never went into production are presented for the first time. The stories about the selected automobiles of the vehicle collection are supplemented by historical recordings from the Mercedes-Benz Classic archive.

Implement Arduino-based designs in your project, and build, debug, and extend it using a solid engineering approach. This second edition is expanded to provide a better understanding of the engineering process and what it means to be an end-to-end developer. You'll start out by reviewing basic engineering procedures, from the fundamental requirements and preliminary design to prototyping and testing. You'll then apply those principles to single devices like LCDs, potentiometers and GPS modules, and move on to the integration of several modules into a larger project, a sub-autonomous robot. This robot will include devices such as GPS, Bluetooth, an OLED screen, an accelerometer, humidity and temp sensor, motor drivers, and ultrasonic sensor. This version goes on to cover how to create 3D models with Fusion360, make your own PCBs using Eagle, and use and maintain a 3D printer. Each and every chapter exemplifies this process and demonstrates how you can profit from the implementation of solid engineering principles—regardless of whether you just play in your basement or you want to publicize and sell

your devices. With Practical Arduino Engineering you'll be able to review and improve this process, and even extend its scope. What You'll Learn ● Set up the Arduino software landscape and project for testing ● Review the process of hardware engineering as applicable to Arduino projects ● Create 3D models for 3D printing using Fusion360 in a robot chassis project ● Make PCBs using Eagle and incorporate it into a sensor station shield project ● Use and maintain a 3D printer with your own project ● Create Arduino shields in Eagle ● Debug Arduino projects of varying complexities via LabVIEW ● Use a special Arduino board for Bluetooth to control domestic and mobile Arduino projects Who This Book Is For Primarily aimed at intermediate engineers or engineering students. However, this book is also great for beginners and any maker who wants to expand their abilities in a single book.

The authors of this Bouquet are people like you. Retired, living in the Lutheran Homes at Glynde, with freedom at last to pursue things they have always wanted to do. Intrigued by a flyer in their letterboxes offering a creative-writing group, the long-held desire to write overcame their hesitation. They came along, one Tuesday afternoon, to meet with Dorothy O'Neill, a Homes resident and the author of several books, to find out more. Every first and third Tuesday in the month, for a year, these seven women worked diligently with Dorothy, to discover and develop the skills they never knew they had. Using simple and homely topics, they drew on their experience, imagination and wisdom to create the varied pieces collected here. Through the group, these strangers found the satisfaction of creative work and the fun and fellowship of a shared endeavour. So here is a bouquet of their work - short stories, poems, spiritual reflections - to prove that creativity flowers in all of us if we will let it: age open, experience not required.
