Programming from the Ground Up

NATHAN AYDIN

Soft Computing: Theories and Applications No Starch Press
Programming from the Ground Up uses Linux assembly language to teach new programmers the most important concepts in programming. It takes you a step at a time through these concepts: * How the processor views memory * How the processor operates * How programs interact with the operating system * How computers represent data internally * How to do low-level and high-level optimization Most beginning-level programming books attempt to shield the reader from how their computer really works. Programming from the Ground Up starts by teaching how the computer works under the hood, so that the programmer will have a sufficient background to be successful in all areas of programming. This book is being used by Princeton University in their COS 217 "Introduction to Programming Systems" course.

An engaging and comprehensive look at the Korean smartphone industry and culture

Smartland Korea Springer

This work shows how the various elements of consumer analysis fit together in an integrated framework, called the Wheel of Consumer Analysis. Psychological, social and behavioural theories are shown as useful for understanding consumers and developing more effective marketing strategies. The aim is to enable students to develop skills in analyzing consumers from a marketing management perspective and in using this knowledge to develop and evaluate marketing strategies. The text identifies three groups of concepts - affect and cognition, behaviour and the environment - and shows how these they influence each other as well as marketing strategy. The focus of the text is managerial, with a distinctive emphasis on strategic issues and problems. Cases and questions are included in each chapter.

This book recounts one of the greatest and most spectacular

business successes and downfalls in history: that of Nokia in mobile phones. The analysis of Nokia's story distills more general observations and learning points for leaders of other corporations, management scholars, and students.

The Illustrated Guide to Assistive Technology and Devices
(EasyRead Super Large 20pt Edition) Academic Press

Not a techie? Don't worry! This friendly and approachable guide shows even complete beginners how to build their first web application. Modern web application design and development can feel overwhelming: How do you design a useful tool that can run on a desktop, tablet, and phone? Which programming framework should you use? How can a non-programmer pick up these skills? Build Your First Web App answers these questions by teaching two popular practical frameworks, Bootstrap and Angular.js, as well as the principles behind programming: the basics of user experience design, planning and structuring your software, and making your application visually attractive and easier to use. The book walks you through every step of creating you first app, and gives you assignments in each chapter. If you already know some HTML and CSS, but want to go further and create something functional rather than static, this book is for you! Book includes: An overview of the app design planning process—scenario development, feature/flow design through wireframing, and user research. Quick tips for adding visual design intelligently to make the application easier to understand and use. A walkthrough of how to code a sample app using a responsive framework (Bootstrap) and Angular.js. Each chapter of the book covers a different part of the sample app, allowing readers to follow along and draft their own code.

PoC or GTFO, Volume 3 McGraw-Hill/Irwin

This book includes high-quality research papers presented at the Third International Conference on Innovative Computing and Communication (ICICC 2020), which is held at the Shaheed Sukhdev College of Business Studies, University of Delhi, Delhi, India, on 21–23 February, 2020. Introducing the innovative works of scientists, professors, research scholars, students and industrial experts in the field of computing and communication, the book promotes the transformation of fundamental research

into institutional and industrialized research and the conversion of applied exploration into real-time applications.

The 4-Hour Work Week O'Reilly Media

This highly anticipated print collection gathers articles published in the much-loved International Journal of Proof-of-Concept or Get The Fuck Out. PoC||GTFO follows in the tradition of Phrack and Uninformed by publishing on the subjects of offensive security research, reverse engineering, and file format internals. Until now, the journal has only been available online or printed and distributed for free at hacker conferences worldwide. Consistent with the journal's quirky, biblical style, this book comes with all the trimmings: a leatherette cover, ribbon bookmark, bible paper, and gilt-edged pages. The book features more than 80 technical essays from numerous famous hackers, authors of classics like "Reliable Code Execution on a Tamagotchi," "ELFs are Dorky, Elves are Cool," "Burning a Phone," "Forget Not the Humble Timing Attack," and "A Sermon on Hacker Privilege." Twenty-four full-color pages by Ange Albertini illustrate many of the clever tricks described in the text.

Thinking German Translation McGraw-Hill Education (UK)

Thinking German Translation is a comprehensive practical course in translation for advanced undergraduate students of German and postgraduate students embarking on Master's translation programmes. Now in its third edition, this course focuses on translation as a decision-making process, covering all stages of the translation process from research, to the 'rewriting' of the source text in the language of translation, to the final revision process. This third edition brings the course up to date, referencing relevant research sources in Translation Studies and technological developments as appropriate, and balancing the coverage of subject matter with examples and varied exercises in a wide range of genres from both literary and specialised material. All chapters from the second edition have been extensively revised and, in many cases, restructured; new chapters have been added—literary translation; research and resources—as well as suggestions for further reading. Offering around 50 practical exercises, the course features material from a wide range of sources, including: business, economics and politics advertising, marketing and consumer texts tourism science and engineering modern literary texts and popular song the literary canon, including poetry A variety of translation issues are addressed, among them cultural differences, genre conventions, the difficult concept of equivalence, as well as some of the key differences between English and German linguistic and textual features. Thinking German Translation is essential reading for all students seriously interested in improving their translation skills. It is also an excellent foundation for those considering a career in translation. A Tutor's Handbook offers comments and notes on the exercises for each chapter, including not only translations but also a range of other tasks, as well as some specimen answers. Extremely accurate prophecies about the end of the world by Our Saints. In this edition, you will find a (back-)translation of some of the prophecies and the instructions of famous Orthodox Saints and hermits. You will have the opportunity to read the words of people who have long since left this world. The words they have left, as prophecies and instructions to us poor and fools are greatly valuable in strengthening our faith and instruction and confirmation of the authenticity and truthfulness of the Orthodox Christianity as a true path to God. Some of the translations of the texts contain specific prophecies related with the lands of Serbia, Russia and Greece. However, many of them apply to all of us, modern Orthodox Christians, as well as to all people on earth. Their words are a warning of a bleak future that awaits us and our descendants.

The world has fallen in love with Nick Gautier and the Dark-Hunters. Now Nick's saga continues in the next eagerly anticipated volume... Go to school. Get good grades. Stay out of trouble. That's the mandate for most kids. But Nick Gautier isn't the average teenager. He's a boy with a destiny not even he fully understands. And his first mandate is to stay alive while everyone, even his own father, tries to kill him. He's learned to annihilate zombies and raise the dead, divination and clairvoyance, so why is learning to drive and keep a girlfriend so dang hard? But that isn't the primary skill he has to master. Survival is. And in order to survive, his next lesson makes all the others pale in comparison. He is on the brink of becoming either the greatest hero mankind has ever known. Or he'll be the one who ends the world. With enemies new and old gathering forces,

he will have to call on every part of himself to fight or he'll lose everyone he cares about. Even himself.
