Written by two INFOSEC experts, this book provides a systematic and practical approach for establishing, managing and operating a comprehensive Information Assurance program. It is designed to provide ISSO managers, security managers, and INFOSEC professionals with an understanding of the essential issues required to develop and apply a targeted information security posture to both public and private corporations and government run agencies. There is a growing concern among all corporations and within the security industry to come up with new approaches to measure an organization's information security risks and posture. Information Assurance explains and defines the theories and processes that will help a company protect its proprietary information including: * The need to assess the current level of risk. * The need to determine what can impact the risk. * The need to determine how risk can be reduced. The authors lay out a detailed strategy for defining information security, establishing IA goals, providing training for security awareness, and conducting airtight incident response to system compromise. Such topics as defense in depth, configuration management, IA legal issues, and the importance of establishing an IT baseline are covered in-depth from an organizational and managerial decision-making perspective. Experience-based theory provided in a logical and comprehensive manner. Management focused coverage includes establishing an IT security posture, implementing organizational awareness and training, and understanding the dynamics of new technologies. Numerous real-world examples provide a baseline for assessment and comparison.

Throughout its many editions, *The Architect in Practice* has remained a leading textbook used in the education of architects. While the content of the book has developed, the message and philosophy has remained constant: to provide students of architecture and young practitioners with a readable guide to the profession, outlining an architect's duties to their client and contractor, the key aspects of running a building contract, and the essentials of management, finance and drawing office procedure. The eleventh edition follows in that tradition. The text has been brought up to date to ensure it follows the new RIBA Plan of Work 2013 as the guide to the architect's workflow. In addition, a number of changes to standard forms of contract were made with the publication of the JCT 2011 suite of contracts, and the RIBA Standard Form for the Appointment of an Architect 2010 (2012 Revision). These new forms are fully covered. In addition, the opportunity has been taken to reorganise the layout so that the content flows in a way that is more consistent with current architectural practice, and to deal with the increasing use of BIM. The eleventh edition of *The Architect in Practice* continues to provide the guidance and advice all students and practising architects need in the course of their studies and in their profession.
