Build your own AK tooling kit? YES! Ever since AK/AKM component kits have been imported into the U.S., enthusiasts and small-volume manufacturers have struggled to find an efficient, accurate, and safe AK-building solution, relying on multiple tools and homemade work-arounds to assemble rifles that are only "almost there." The tooling components illustrated in this book eliminate the guesswork to offer safe, accurate solutions that new and experienced AKM builders have asked for. Build Your Own AK/AKM Tooling Kit provides all the specifications needed to create your own kit thanks to detailed, easy-to-read blueprints. The AK Tooling System allows individuals, gunsmiths, and small-volume custom manufacturers to correctly and safely perform the pressing, pinning, and riveting operations involved in the construction of AK/AKM-pattern 7.62x39mm semi-automatic rifles featuring stamped steel receivers and fixed stock rear trunnions while utilizing a common tooling platform. It also simplifies the installation of the front sight block, gas block, rear sight block, and barrel trunnion/receiver assembly onto an AK/AKM barrel while ensuring Top Dead Center alignment. The unique design of the press fixture assembly allows all components to be installed in a controlled, safe manner in a single press setup by using a standard 12-ton hydraulic home shop press. With the AK Tooling System you can: * Press the front sight block, gas block, and rear sight block onto an AKM barrel in a single pressing operation or individual pressing operations while ensuring top-dead-center alignment of these components to the barrel. * Install the barrel pin and all pins associated with the front sight block, gas block, and rear sight block. * Achieve correct headspace dimension while pressing the riveted barrel trunnion and receiver assembly onto a populated AKM barrel. * Install trigger guard, center support, and fixed stock trunnion rivets. * Disassemble a demilitarized AKM kit.
Unreal Engine Game Development Blueprints Christian Faith Publishing, Inc. A "well-researched and very readable new biography" (The Wall Street Journal) of "the Thomas Edison of guns," a visionary inventor who designed the modern

handgun and whose awe-inspiring array of firearms helped ensure victory in numerous American wars and holds a crucial place in world history. Few people are aware that John Moses Browning—a tall, humble, cerebral man born in 1855 and raised as a Mormon in the American West—was the mind behind many of the world-changing firearms that dominated more than a century of conflict. He invented the design used in virtually all modern pistols, created the most popular hunting rifles and shotguns, and conceived the machine guns that proved decisive not just in World Wars I and II but nearly every major military action since. Yet few in America knew his name until he was into his sixties. Now, author Nathan Gorenstein brings firearms inventor John Moses Browning to vivid life in this riveting and revealing biography. Embodying the tradition of self-made, self-educated geniuses (like Lincoln and Edison), Browning was able to think in three dimensions (he never used blueprints) and his gifted mind produced everything from the famous Winchester "30-30" hunting rifle to the awesomely effective machine guns used by every American aircraft and infantry unit in World War II. The British credited Browning's guns with helping to win the Battle of Britain. His inventions illustrate both the good and bad of weapons. Sweeping, lively, and brilliantly told, this fascinating book that "gun collectors and historians of armaments will cherish" (Kirkus Reviews) introduces a little-known legend whose impact on history ranks with that of the Wright Brothers, Thomas Edison, and Henry Ford.

True Infinity: The AC Factor has been in the works in my mind for decades. I would get an idea about something that I had seen or heard and would dissect it in my brain as to its validity and relevance to our life journey. Time is critical in every aspect of this story as it also is to the fact that I haven't written it until now. Now I have experienced and understand better all that has presented itself across my stage. With the love of science and exploration that has transfigured my thought patterns, I have composed a fascinating story woven

into a complex and adventuresome tale taken from what has personally happened to me. Set a few years into the future under a different, and I think superior, space exploration agenda, we find the main and supportive characters struggling with the questions of utmost importance in life. How they interact and deal with those questions and problems that everyone must face will ultimately determine their destiny. During your trek through these pages, you will encounter a reenactment of a time when I was actually drowning and could do nothing to stop it. The fact that I am here to write this book is quite remarkable. I hope that this will impact your life in a positive way and allow for you to ponder the most important questions that everyone has on their minds before time runs out. True Infinity: The AC Factor is a concept forty years in the making. Having experimented with poems and short stories during my high school years, it has always been a dream of mine to one day write a novel. To understand the title is only accomplished by reading the book. The story is more in the lines of science fiction, yet all of the situations really did happen to me and the people associated with my life, even the dying episode. The names were changed to protect the innocent. Used are many names of family members and people that I have known, but the characters' personality does not correspond to the names given. The stage is set a few years into the future with a few tweaks. After the Apollo missions, the government continued to pursue vigorously the exploration of space by setting up bases on the moon. Most of the history and political atmosphere remains the same, so as to be relatable. Every time that I would proof read this book, tears would swell from the bringing back of all of the memories. I hope that whoever has the opportunity to read this story can glean something positive and useful from its pages and pay it forward. Thank you so very much.

With the same raw energy and verve he displayed in *Easy Money*, Jens Lapidus delivers an electrifying tale of Stockholm's vicious underworld. Mahmud is fresh out of jail, but he's forced to work for a brutal mob boss to pay off his debts to a drug

lord. Niklas, a mercenary and weapons expert with an appetite for vigilante justice, is back in Sweden and plans to keep a low profile. But the discovery of a murdered man in his mother's building severely threatens those plans. Thomas, the volatile detective on the case, finding his efforts suspiciously stymied and the evidence tampered with, goes off the grid in search of the truth. But as the paths of these three men intertwine and the identity of the murdered man is revealed, crimes and secrets bigger, deeper, and darker than a mere murder will come to light.

The impact of light on works of art and archival materials has long been an issue of concern to conservators and other museum professionals, yet the literature on this subject has never been systematically reviewed. This volume fills that gap by providing a survey of the impact of exposure to light with an emphasis on photoflash and reprographic sources. The information provided will assist the professional audience, especially conservators and collections managers, in assessing the risk to art and archival objects of such exposures. The text surveys relevant photophysical and photochemical principles, photometric and radiometric measurement, and the spectral outputs of several light sources. Materials discussed include colorants and natural fibers; pulp, paper, and wood; natural and synthetic polymers; fluorescent whitening agents; photographic and reprographic materials; and objects containing combinations of materials. Approximations and assumptions used in the evaluation process are discussed in some detail, with examples of the different types of calculations. The Research in Conservation reference series presents the findings of research conducted by the Getty Conservation Institute and its individual and institutional research partners, as well as state-of-the-art reviews of conservation literature. Each volume covers a topic of current interest to conservators and conservation scientists.

A concise and self-contained introduction to causal inference, increasingly important in data science and machine learning. The mathematization of causality is a relatively recent development, and has become increasingly important in data science and machine learning. This book offers a self-contained and concise introduction to causal models and how to learn them from data. After explaining the need for causal models and discussing some of the principles underlying causal inference, the book teaches readers how to use causal models: how to compute intervention distributions, how to infer causal models from observational and interventional data, and how causal ideas could be exploited for classical machine learning problems. All of these topics are discussed first in terms of two variables and then in the more general multivariate case. The bivariate case turns out to be a particularly hard problem for causal learning because there are no conditional independences as used by classical methods for solving multivariate cases. The authors consider analyzing statistical asymmetries between cause and effect to be highly instructive, and they report on their decade of intensive research into this problem. The book is accessible to readers with a background in machine learning or statistics, and can be used in graduate courses or as a reference for researchers. The text includes code snippets that can be copied and pasted, exercises, and an appendix with a summary of the most important technical concepts.

The Guns of John Moses Browning Paladin Press

Abstract: This paper introduces the first effort to quantitatively document the small arms market by collating field reports and journalist accounts to produce a cross-country time-series price index of Kalashnikov assault rifles. A model of the small arms market is developed and empirically estimated to identify the key determinants of assault rifle prices. Variables which proxy the effective height of trade barriers for illicit trade are consistently significant in determining weapon price variation. When controlling for other factors, the collapse of the Soviet Union does not have as large an impact on weapon prices as is generally believed.
