Stalin ordered his execution, but here Peter Palchinsky has the last word. As if rising from an uneasy grave, Palchinsky's ghost leads us through the miasma of Soviet technology and industry, pointing out the mistakes he condemned in his time, the corruption and collapse he predicted, the ultimate price paid for silencing those who were not afraid to speak out. The story of this visionary engineer's life and work, as Loren Graham relates it, is also the story of the Soviet Union's industrial promise and failure. We meet Palchinsky in pre-Revolutionary Russia, immersed in protests against the miserable lot of laborers in the tsarist state, protests destined to echo

ironically during the Soviet worker's paradise. Exiled from the country, pardoned and welcomed back at the outbreak of World War I, the engineer joined the ranks of the Revolutionary government, only to find it no more open to criticism than the previous regime. His turbulent career offers us a window on debates over industrialization. Graham highlights the harsh irrationalities built into the Soviet system—the world's most inefficient steel mill in Magnitogorsk, the gigantic and ill-conceived hydroelectric plant on the Dnieper River, the infamously cruel and mislocated construction of the White Sea Canal. Time and again, we see the effects of policies that ignore not only the workers' and consumers' needs but also sound management and engineering precepts. And we see Palchinsky's criticism and advice, persistently given, consistently ignored, continue to haunt the Soviet Union right up to its dissolution in 1991. The story of a man whose gifts and character set him in the path of history, *The Ghost of the Executed Engineer* is also a cautionary tale about the fate of an engineering that disregards social and human issues. David Hume wrote that Berkeley's arguments 'admit of no answer but produce no conviction'. This book aims at the kind of understanding of Berkeley's philosophy that comes from seeing how we ourselves might be brought to embrace it. Berkeley held that matter does not exist, and that the sensations we take to be caused by an indifferent and independent world are instead caused directly by God. Nature becomes a text, with no existence apart from the spirits who transmit and receive it. Kenneth P. Winkler presents these conclusions as natural (though by no means inevitable) consequences of Berkeley's reflections on such topics as representation, abstraction, necessary truth, and cause and effect. In the closing chapters Proefssor Winkler offers new interpretations of Berkeley's view on unperceived objects, corpuscularian science, and our knowledge of God and other minds.

Understanding Robotics is an introductory text on robotics and covers topics ranging from from the components of a robotic system, including sensors, to the industrial applications of robotics. The major factors justifying the use of robots for manufacturing are also discussed, along with the use of robots as a manufacturing tool, their impact on people, and the future of robotics. This book is comprised of eight chapters and begins with an overview of the roots of robotics and the use of robots in the manufacturing environment; advances in robot technology and typical applications of robots; reasons for using robots in the manufacturing environment; and the different manufacturing functions they perform, including visual inspection and intricate welding operations. A definition of the word "robot" is presented, and the impact of robots on jobs is considered.

Subsequent chapters focus on the elements of a robot system, including the computer/controller, actuator power drive, and sensors; sensor applications in robotics; robotic usage by industry; economic justification of robotics; manufacturing technology and the role robotics can play in improving the United States' competitive manufacturing position; and the impact of robots on people and vice versa. The final chapter is devoted to market trends and competitiveness of the U.S. robotics industry and assesses the future prospects of robotics. This monograph should be a valuable resource for technologists and researchers interested in robots and robotics.

The Just-in-time (JIT) manufacturing system is an internal system in use by its founder, Toyota Motor Corporation, but it has taken on a new look. Toyota Production System, Second Edition systematically describes the changes that have occurred to the most efficient production system in use today. Since the publication of the first edition of this book in 1983, Toyota has integrated JIT with computer integrated manufacturing technology and a strategic information system. The JIT goal of producing the necessary items in the necessary quantity at the necessary time is an internal driver of production and operations management. The addition of computer integrated technology (including expert systems by artificial intelligence) and information systems technology serve to further reduce costs, increase quality, and improve lead time. The new Toyota production system considers how to adapt production schedules to the demand changes in the marketplace while satisfying the goals of low cost, high quality, and timely delivery. The first edition of this book, Toyota Production System, published in 1983, is the basis for this book. It was translated into many languages including Spanish, Russian, Italian, Japanese, etc., and has played a definite role in inspiring production management systems throughout the world.

As many "service industry" employees will tell you, every time they think that they've seen it all, someone proves them wrong. From retail clerks, to waitress' we can all tell you. People, the public we enjoy serving, sometimes have some interesting interpretations of the type of service and

rights they are entitled to. Those of us still in this industry enjoy the ever changing and challenging situations. Many seasoned sales people will tell you that buying and selling is an extremely emotional issue. This book will prove it. This book is to be considered an observation of life, and the human emotions that drive it. It is my belief that the vast majority of people are basically good, upstanding and want fairness. Sometimes even the best of us are clueless or less than brilliant at times. It is said that prostitution is the world's oldest occupation. A good sales person will beg to differ. After all how do you think the deal was made in the first place? To avoid burnout, many of us take these "interpretations" with a sense of humor and frequently a grain of aspirin. We note the time of day casually scratching our arm so we can see our watch or check it on our computer monitor. Some days closing time can't come fast enough. Other days have been great and we've made everyone happy. Finally "beer thirty" comes and we can trade stories with others that can relate. The author of this book has spent over thirty seven years doing what it takes in quest of learning the art of selling, as well as the art of survival. Together with his wife Deb, They own a pet

shop "Aquaria Pets" in Hutchinson Minnesota. What could possibly happen there? After all it's a place of enchantment and wonder. Everyone loves the soothing qualities of pet's right? But be forewarned humor is the best defense, and no matter how funny the joke is, someone we promise will be offended. Consider yourself warned now. Steve is many times called politically incorrect. It's not that he doesn't care. He does. He really tries. Steve is over forty years old. Call him a fat white guy. He won't care. His head is covered with gray hair he calls it the badge of "courage." His ethnic background is well varied. As far as life goes, he has been "around the block and through the mill." Little offends him. Life isn't perfect. This is the real thing. It isn't a rehearsal. Go ahead be rude give him a bad time. That's o.k. He shoots back. Deb watches in disbelief while trying to keep a straight face. Get ready for a trip into the sublime, the ridiculous, and the absurd. Because as silly as it gets. As indignant as they get. No matter how many times they claim they will never shop here again... They keep coming back!
