[Annual Report - Intermountain Forest & Range Experiment Station](#) Little Bound Books

This book is a translation of a series of papers on the results of the association method applied to normal and abnormal persons, which appeared in the *Journal für Psychologie und Neurologie* (vols. III-XVI) and were afterwards collected into two volumes.

[Annual Report - Pacific Northwest Forest and Range Experiment Station](#) Resonancebookworks

I can hear you asking, "What's the point of this letter, Dad?" Maybe the letter is just an experiment in time travel, an opportunity for you to reach back across the decades to know your father's heart and mind at a specific moment during your childhood. Or maybe it's about our collective identity: Who am I with you? Who am I apart from you? If I get lucky and die at a reasonable old age, you will be approximately the same age I am now when you finally read this. I like the symmetry of that possibility, especially if you have children, and you're in the throes of trying to be a not-so-terrible parent yourself.

[Research Report from the Michigan State University Agricultural Experiment Station, East Lansing](#) National Academies Press

This proceedings volume contains selected papers presented at the 2014 International Conference on Education Management and Management

Science (ICEMMS 2014), held August 7-8, 2014, in Tianjin, China. The objective of ICEMMS2014 is to provide a platform for researchers, engineers, academicians as well as industrial professionals from all over the world.

*The Year of Magical Thinking* Hampton Roads Publishing Company

We shall examine the validity of 16 experimental designs against 12 common threats to valid inference. By experiment we refer to that portion of research in which variables are manipulated and their effects upon other variables observed. It is well to distinguish the particular role of this chapter. It is not a chapter on experimental design in the Fisher (1925, 1935) tradition, in which an experimenter having complete mastery can schedule treatments and measurements for optimal statistical efficiency, with complexity of design emerging only from that goal of efficiency. Insofar as the designs discussed in the present chapter become complex, it is because of the intransigency of the environment: because, that is, of the experimenter's lack of complete control.

**Insomniac Dreams** Princeton University Press

This book constitutes the refereed proceedings of the 22nd Smoky Mountains Computational Sciences and Engineering Conference on Accelerating Science and Engineering Discoveries Through Integrated Research Infrastructure for Experiment, Big Data, Modeling and Simulation, SMC 2022, held virtually, during August 23-25, 2022. The 24 full papers included in this book were carefully reviewed and selected from 74 submissions. They were organized in topical sections as follows: foundational methods enabling science in an integrated ecosystem; science and engineering applications

requiring and motivating an integrated ecosystem; systems and software advances enabling an integrated science and engineering ecosystem; deploying advanced technologies for an integrated science and engineering ecosystem; and scientific data challenges.

*The Study of Time* John Wiley & Sons

Evaluation and Experiment: Some Critical Issues in Assessing Social Programs is a collection of papers presented at the 1973 symposium held at The Battelle Seattle Research Center. This book contains eight chapters that consider some selected aspects of the problems in evaluating the outcomes of socially important programs, such as those dealing with education, health, and economic policy. The first chapter provides an overview of the issues around the Social Program Evaluation. The next chapters deal with the successes and failures brought by social innovations; the quasi-experimental evaluation in compensatory education to estimate the true effects of such education programs; and the usefulness and validity of econometric and related nonexperimental approaches for assessing the effects of social programs. These topics are followed by surveys of a number of additional program-evaluation studies, particularly in the field of family planning or fertility control, mostly carried out as experiments or quasi-experiments in Asian and Latin American countries. Other chapters describe the decision processes that involve explicit assessment of the worth or merit of outcomes and employ multivalued utility analysis and outline the ways in which evaluative data are useful in providing feedback to program or institutional operations and decisions. The final chapter discusses resolutions for some of the disagreements expressed by others concerning the role of field experiments, constraints in their utilization, and other factors that enter into a comprehensive conception of program evaluation.

**Report of the Central States Forest Experiment Station** DIANE Publishing

In eight case studies by leading scholars in history, archaeology, business, economics, geography, and political science, the authors showcase the "natural experiment" or "comparative method"—well-known in any science concerned with the past—on the discipline of human history. That means, according to the editors, "comparing, preferably quantitatively and aided by statistical analyses, different systems that are similar in many respects, but that differ with respect to the factors whose influence one wishes to study." The case studies in the book support two overall conclusions about the study of human history: First, historical comparisons have the potential for yielding insights that cannot be extracted from a single case study alone. Second, insofar as is possible, when one proposes a conclusion, one may be able to strengthen one's conclusion by gathering quantitative evidence (or at least ranking one's outcomes from big to small), and then by testing the conclusion's validity statistically.

**Reproducibility and Replicability in Science** Elsevier

NEW YORK TIMES BESTSELLER • NATIONAL BOOK AWARD WINNER • From one of America's iconic writers, a stunning book of electric honesty and passion that explores an intensely personal yet universal experience: a portrait of a marriage—and a life, in good times and bad—that will speak to anyone who has ever loved a husband or wife or child. Several days before Christmas 2003, John Gregory Dunne and Joan Didion saw their only daughter, Quintana, fall ill with what seemed at first flu, then pneumonia, then complete septic shock. She was put into an induced coma and placed on life support. Days later—the night before New Year's Eve—the Dunnes were just sitting down to dinner after visiting the hospital when John Gregory Dunne suffered a massive and fatal coronary. In a second, this close, symbiotic partnership of forty years was over. Four weeks later, their daughter pulled through. Two months after that, arriving at LAX, she collapsed and underwent six hours of brain surgery at UCLA Medical Center to relieve a massive hematoma. This powerful book is Didion's attempt to make sense of the "weeks and then months that cut loose any fixed idea I ever had about death, about illness ... about marriage and children and memory ... about the shallowness of sanity, about life itself.

*Experimental and Quasi-Experimental Designs for Research* Harvard University Press

One of the pathways by which the scientific community confirms the validity of a new scientific discovery is by repeating the research that produced it. When a scientific effort fails to independently confirm the computations or results of a previous study, some fear that it may be a symptom of a lack of rigor in science, while others argue that such an observed inconsistency can be an important precursor to new discovery. Concerns about

reproducibility and replicability have been expressed in both scientific and popular media. As these concerns came to light, Congress requested that the National Academies of Sciences, Engineering, and Medicine conduct a study to assess the extent of issues related to reproducibility and replicability and to offer recommendations for improving rigor and transparency in scientific research. Reproducibility and Replicability in Science defines reproducibility and replicability and examines the factors that may lead to non-reproducibility and non-replicability in research. Unlike the typical expectation of reproducibility between two computations, expectations about replicability are more nuanced, and in some cases a lack of replicability can aid the process of scientific discovery. This report provides recommendations to researchers, academic institutions, journals, and funders on steps they can take to improve reproducibility and replicability in science.

*Education Management and Management Science* Good Press

First published in 1927, this text explores the relationship between dreams, time, and reality. It shows how a scientific experiment probes the nature of time and the barrier dividing past and future, and offers a scientific argument for human immortality

[Nothing Dies](#) Ravenio Books

A new edition of J W Dunne's famous and brilliant time theory work. A short, no fuss account of the theory without mathematics. Also in the series; An Experiment with Time; The Serial Universe; The New Immortality

[Research Notes - Pacific Northwest Forest and Range Experiment Station](#) Vintage

J.W. Dunne's thought-provoking book, 'An Experiment with Time' delves into the realm of precognition and presents a groundbreaking theory of time known as "Serialism." Drawing on his own experiences, Dunne explores the phenomenon of precognitive dreams, where future personal events are foreseen by the dreamer. Building upon this foundation, he delves into the concept of multiple dimensions of time, each accompanied by a higher level of consciousness. Through his meticulous experiments and reflections, Dunne uncovers the intricacies of our perception of time, delving into the realms of past, present, and future.

**Experimental Studies in Judgement** Springer Nature

First publication of an index-card diary in which Nabokov recorded sixty-four dreams and subsequent daytime episodes, allowing the reader a glimpse of his innermost life.

*Time and Motion Study* CRC Press

Research Methods in Social Relations, 8th Edition, features a series of updates and revisions in its comprehensive introduction to current research methods in the social and behavioural sciences. Offers comprehensive coverage of a wide variety of traditional and topical research methods Addresses many newer research approaches such as propensity score matching, mixed methods designs, and confirmatory factor analysis Written to be accessible to a range of social and behavioural science disciplines, including public health, political science, sociology, and psychology Includes new chapters that engage readers in critical thinking about the processes involved in building sustainable partnerships in field and community settings The Companion website includes an array of resources for Instructors, including Test Banks, Power Point lecture slides, discussion questions and exercises This new edition is the much-anticipated follow-up to 2001's seventh edition by Hoyle, Harris and Judd
