SRE with Java

Microservices New

Saraswati House India Pvt Ltd

In a microservices architecture, the whole is indeed greater than the sum of its parts. But in

practice, individual microservices can inadvertently impact others and alter the end user experience. Effective microservices architectures require standardization on an organizational level with the help of a platform engineering team. This practical book provides a series of progressive steps that platform engineers can apply technically and organizationally to achieve highly resilient Java applications. Author Jonathan Schneider covers many effective SRE practices from companies leading the way in microservices adoption. You'll examine several patterns discovered through much trial and error in recent years, complete with Java code examples. Chapters are organized according to specific patterns, including: Application metrics: Monitoring for availability with Micrometer Debugging with observability: Logging and distributed tracing; failure injection testing Charting and alerting: Building effective charts; KPIs for Java microservices Safe multicloud delivery: Spinnaker, deployment strategies, and automated

canary analysis Source code observability: Dependency management, API utilization, and end-to-end asset inventory Traffic management:

Concurrency of systems; platform, gateway, and client-side load balancing

Creating a Culture for High-Performing

Schools Saint Mary's Press

A high-performing school is described as one where student achievement is high and student and teacher absenteeism is low. Student behavior is such that teachers seldom have to control them or tell them what to do. This results in greater time on task, higher teacher morale, low teacher absenteeism, and improved parental support. One other distinctive feature of a high-performing school is that the student peer group is a positive force and not a negative force. The end result is a school culture where faculty and students trust and care about each other, and there is a cooperative attitude.

The author explains why it's essential to begin the preparations by deciding

what the meeting is intended to accomplish. That, in turn, determines what kind of meeting you should conduct: informational, advisory, or problem-solving. The author breaks down the essential tasks involved and even suggests the right type of person to handle each one. She describes various types of troublesome meeting attendees—from accusers and apathetics to fence-sitters and know-it-alls—and offers advice on how to deal tactfully but firmly with them all. The author also tackles working effectively with the media, a subject that terrifies most planners. True stories of public meetings, both good and bad, add humor to her no-nonsense narrative. Follow her step-by-step checklist and leave nothing to chance."

Consequently, the people who create collection level records and metadata for these resources need to be equally conversant in the principles of cataloging. Martha Yee covers both descriptive (AACR2R,

AMIM, and FIAF rules) and subject cataloging (with a focus on LCSH). In the process, the reader is encouraged to think critically and to be prepared to make decisions in ambiguous situations where solutions to problems are not always obvious or clearly dictated by specific rules.

Tagging is fast becoming one of the primary ways people organize and manage digital information. Tagging complements traditional organizational tools like folders and search on users desktops as well as on the web. These developments mean that tagging has broad implications for information management, information architecture and interface design. And its reach extends beyond these technical domains to our culture at large. We can imagine, for example, the scrapbookers of the future curating their

digital photos, emails, ticket stubs and other mementos with tags. This book explains the value of tagging, explores why people tag, how tagging works and when it can be used to improve the user experience. It exposes tagging's superficial simplicity to reveal interesting issues related to usability, information architecture, online community and collective intelligence.
