This volume celebrates the 50th
anniversary of the famous and influential
work of Jean Piaget and Alina Szeminska,

The Child's Conception of Number. It is a
tribute to those two authors as well as to
the entire Geneva school that pioneered
the genetic study of cognitive structures
in children. Dealing with the process of
the child's construction of the notion of
number -- a very important subject for
the child as well as for the teacher, the
researcher, and the practicing

psychologist -- it summarizes the progress that has been made and outlines new research directions in this area. The book is a compilation of the work of the foremost international researchers in this area and includes a wide spectrum of viewpoints and schools of thought. It also introduces several new authors from Europe, including students of Piaget, to the American academic community.

Deze studie ontwikkelt een geheel nieuwe benadering van het vraagstuk: Hoe wordt migratie- en integratiebeleid in tien Europese landen gemaakt? Wie is daarbij betrokken? Welke invloed hebben wetenschappers en

maatschappelijke partners op de vorming en uitvoering van beleid? De auteurs concluderen dat beleid begrepen moet worden als resultaat van nationale historische verhoudingen en opvattingen binnen nationale contexten enerzijds, en anderzijds ontstaan is onder invloed van wereldwijde en supra-nationale invloeden.

Previously, key levers of higher education have seemed to be the learning organization, work-integrated learning for life-long learning, and learner-centered pedagogy. However, funding evolution and the integration of digital tools are changing professional styles and learning behaviors. Nonetheless, the sustainability of higher education requires quality agreement

based on ethical, robust, and replicable pedagogical approaches. The Handbook of Research on Operational Quality Assurance in Higher Education for Life-Long Learning is a comprehensive scholarly book that focuses on the evolution of the education framework and job market as well as necessary changes needed in organizations to reply to life-long learning and competency-based training initiatives. Highlighting topics such as digital environment, e-learning, and learning analytics, this book is essential for higher education faculty, managers, deans, professionals, administrators, educators, academicians, researchers, and policymakers.

La finance est en crise ; mais elle est indispensable à la vie des hommes en société. Cependant, il serait abusif de considérer "la finance" comme un tout homogène. En effet, loin de la finance conventionnelle qui fait la une de l'actualité, il existe une finance dite alternative qui tente de placer et de maintenir l'Homme au centre de son projet et à l'horizon de son ambition. Cet ouvrage, premier du genre, se propose de présenter sous forme d'études réalisées par des spécialistes du droit financier, les manifestations de cette finance alternative, les outils, instruments et techniques juridiques qui

existent et qui permettent de concilier finance et humanisme. À travers l'analyse des critères de développement durable ou religieux appliqués à la finance, des monnaies alternatives, du microcrédit, de la notation extra-financière, du mutualisme et du coopératisme en finance, du crowdfunding, des fonds éthiques, du financement associatif, du financement alternatif de l'habitat ou du soutien des collectivités publiques aux entreprises, ce livre fait, en France comme en Espagne, au Royaume-Uni, en Grèce et au Canada, un tour d'horizon complet de ce segment du secteur financier souvent méconnu et qui offre néanmoins aux Hommes de réaliser leurs projets dans la perspective d'un mieux-être collectif. Pour rompre avec l'idée que la finance

n'est que spéculation et prédation.

 Originally published in 1988, this book compiles a collection of works investigating the impact of recession on women's employment. The authors argue that the most important explanation of differences in women's experience between the countries is the form of labour market regulation and organisation. They point out that current changes in these forms of regulation, and not displacement of female labour, pose the main threat to any gains that women have made in the labour market in the post- World War II period.

Cork oak has historically been an important species in the western Mediterranean—ecologically as a canopy or “framework” tree in natural woodlands, and culturally as an economically valuable resource that underpins local economies. Both the natural woodlands and the derived cultural systems are experiencing rapid change, and whether or not they are resilient enough to adapt to that change is an open question. *Cork Oak Woodlands on the Edge* provides a synthesis of the most up-to-date, scientific, and practical information on the management of cork oak woodlands and the cultural systems that depend on cork oak. In addition, *Cork Oak Woodlands on the Edge* offers ten site profiles written by local experts that

present an in-depth vision of cork oak woodlands across a range of biophysical, historical, and cultural contexts, with sixteen pages of full-color photos that illustrate the tree, agro-silvopastoral systems, products, resident biodiversity, and more. *Cork Oak Woodlands on the Edge* is an important book for anyone interested in the future of cork oak woodlands, or in the management of cultural landscapes and their associated land-use systems. In a changing world full of risks and surprises, it represents an excellent example of a multidisciplinary and holistic approach to studying, managing, and restoring an ecosystem, and will serve as a guide for other studies of this kind.

I then compare Cesaire's Caribbean "shape" to that of Rene Depestre, and a quite different model emerges. I find that Africa is relatively absent in Depestre's work: Europe is not presented as a threat; and that Depestre, unlike Cesaire, sees, in the Caribbean, an energy and a creativity brought about by the historical fusion of disparate cultures. I consider how the reality of Depestre's long exile from the Caribbean has affected his views of the islands.

This book presents unique insights into a significant area of French research relating the learning and teaching of mathematics in school classrooms and their development. Having previously

had only glimpses of this work, I have found the book fascinating in its breadth of theory, its links between epistemological, didactic and cognitive perspectives and its comprehensive treatment of student learning of mathematics, classroom activity, the work of teachers and prospective teacher development. Taking theoretical perspectives as their starting points, the authors of this volume present a rich array of theoretically embedded studies of mathematics teaching and learning in school classrooms. Throughout this book the reader is made aware of many unanswered questions and challenged to consider associated theoretical and methodological issues. For English-speaking communities who have lacked opportunity to access the French

literature the book opens up a wealth of new ways of thinking about and addressing unresolved issues in mathematics learning, teaching and teacher education. I recommend it wholeheartedly! (Extract from Barbara Jaworski's preface.)

Chemistry in the last century was characterized by spectacular growth and advances, stimulated by revolutionary theories and experimental breakthroughs. Yet, despite this rapid development, the history of this scientific discipline has achieved only recently the status necessary to understand the effects of chemistry on the scientific and technological culture of the modern world. This book addresses

the bridging of boundaries between chemistry and the other "classical" disciplines of science, physics and biology as well as the connections of chemistry to mathematics and technology. Chemical research is represented as an interconnected patchwork of scientific specialties, and this is shown by a mixture of case studies and broader overviews on the history of organic chemistry, theoretical chemistry, nuclear- and cosmochemistry, solid state chemistry, and biotechnology. All of these fields were at the center of the development of twentieth century chemistry, and the authors cover crucial topics such as the emergence of new subdisciplines and research fields, the science-technology relationship, and national styles of

scientific work. This monograph represents a unique treasure trove for general historians and historians of science, while also appealing to those interested in the theoretical background and development of modern chemistry.

Skills Management Springer

The growing complexity of projects today, as well as the uncertainty inherent in innovative projects, is making obsolete traditional project management practices and procedures, which are based on the notion that much about a project is known at its start. The current high level of change and complexity confronting organizational leaders and managers requires a new approach to projects so they can be managed flexibly to embrace and exploit change. What once used to be

considered extreme uncertainty is now the norm, and managing planned projects is being replaced by managing projects as they evolve. Successfully managing projects in extreme situations, such as polar and military expeditions, shows how to manage successfully projects in today's turbulent environment. Executed under the harshest and most unpredictable conditions, these projects are great sources for learning about how to manage unexpected and unforeseen situations as they occur. This book presents multiple case studies of managing extreme events as they happened during polar, mountain climbing, military, and rescue expeditions. A boat accident in the Artic is a lesson on how an effective project

manager must be ambidextrous: on one hand able to follow plans and on the other hand able to abandon those plans when disaster strikes and improvise new ones in response. Polar expeditions also illustrate how a team can use "weak links" to go beyond its usual information network to acquire strategic information. Fire and rescues operations illustrate how one team member's knowledge can be transferred to the entire team. Military operations provide case material on how teams coordinate and make use of both individual and collective competencies. This groundbreaking work pushes the definitions of a project and project management to reveal new insight that benefits researchers, academics, and the practitioners managing projects in today's challenging

and uncertain times.

Apprivoiser les Peurs-pas-fines débute par L'histoire de bravoure de Léo le lionceau. Léo est trop timide, nerveux et effrayé pour parler à d'autres animaux ou à ses enseignants - et il a définitivement peur de son propre rugissement. Avec l'aide de sa maman, Léo apprend que le changement demande de la patience, de la pratique et des outils pratiques. Léo surmonte son anxiété en apprivoisant ses Peurs-pas-fines et utilise même ses nouvelles compétences pour aider son amie, Ellie l'éléphante, à affronter sa peur des hauteurs et son besoin d'être toujours parfaitement parfaite. Le cahier de

travail Dans la tanière de Léo le lionceau : Comment apprivoiser tes Peurs-pas-fines décrit les techniques qui ont aidé Léo à trouver sa voix et à surmonter sa timidité. Ces pratiques ont été développées par des pédopsychiatres expérimentés pour aider les enfants qui souffrent d'anxiété intense, y compris ceux qui sont excessivement timides, incapables de parler dans des situations sociales ou qui craignent de nouvelles expériences et de nouvelles personnes. Apprivoiser les Peurs-pas-fines vise à aider votre jeune enfant à devenir plus conscient de ses émotions et à apprendre à faire face à l'anxiété grâce à des exercices amusants, créatifs et actifs.

Extended Working Life Policies Odile Jacob

Science as an instrument to justify religious missions in secular society The relationship between religion and science is complex and continues to be a topical issue. However, it is seldom zoomed in on from both Protestant and Catholic perspectives. By doing so the contributing authors in this collection gain new insights into the origin and development of missiology. Missiology is described in this book as a "project of modernity," a contemporary form of apologetics. "Scientific apologetics" was the way to justify missions in a society that was rapidly becoming secularized. Mission & Science deals with the interaction between new scientific disciplines (historiography, geography, ethnology, anthropology, linguistics) and new scientific insights (Darwin's

evolutionary theory, heliocentrism), as well as the role of the papacy and what inspired missionary practice (first in China and the Far East and later in Africa). The renewed missiology has in turn influenced the missionary practice of the twentieth century, guided by apostolic policy. Some “missionary scholars” have even had a significant influence on the scientific discourse of their time.

The European Federation for Medical Informatics has established itself as a regional body coordinating activity in medical informatics. The Congress in Toulouse, MIE-81, from 9 - 13 March 1981, is the third congress in the series following MIE-78 in Cambridge, and

MIB-79 in Berlin with a gap during 1980 for the world congress MEDINFO-80 in Tokyo. The rationale behind all these congresses is the scientific need to share results and ideas and the educational need to train a wide variety of professional staff in the potential of health care and medical informatics. All the caring professions are involved, doctors, scientists, nurses, para-medical staff, administrators, health care planners, community physicians, epidemiologists, statisticians, operations analysts together with specialists from the computing profession dealing with system analysis, hardware, software, languages, data-bases and the marketing of systems. Medical Informatics is a very wide subject with ramifications throughout the health care

and preventive services; it offers a key to the monitoring and improvement of patient care and to the provision of a healthier environment. The collection and evaluation of relevant data improves our understanding of the ways in which health care is provided while the availability of cheaper computer hardware and more versatile software enables us to design and implement more revealing and intelligent medical systems. Even though typical systems take a substantial amount of time to design, implement and evaluate, there is the continuing need for informaticians to assess the current state of developmen.

For a food product to be a success in the marketplace it must be stable

throughout its shelf-life. Quality deterioration due to chemical changes and alterations in condition due to physical instability are not always recognised, yet can be just as problematic as microbial spoilage. This book provides an authoritative review of key topics in this area. Chapters in part one focus on the chemical reactions which can negatively affect food quality, such as oxidative rancidity, and their measurement. Part two reviews quality deterioration associated with physical changes, such as moisture loss, gain and migration, crystallization and emulsion breakdown. Contributions in the following section outline the likely effects on different foods and beverages, including bakery products, fruit and vegetables, ready-to-eat meals and

wine. With contributions from leaders in their fields, Chemical deterioration and physical instability of food and beverages is an essential reference for R&D and QA staff in the food industry and researchers with an interested in this subject. Examines chemical reactions which can negatively affect food quality and measurement Reviews quality deterioration associated with physical changes such as moisture loss, gain and migration, and crystallization Documents deterioration in specific food and beverage products including bakery products, frozen foods and wine
