An Introduction to Biotechnology is a biotechnology textbook aimed at undergraduates. It covers the basics of cell biology, biochemistry and molecular biology, and introduces laboratory techniques specific to the technologies addressed in the book; it addresses specific biotechnologies at both the theoretical and application levels. Biotechnology is a field that encompasses both basic science and engineering. There are currently few, if any, biotechnology textbooks that adequately address both areas. Engineering books are equation-heavy and are written in a manner that is very difficult for the non-engineer to understand. Numerous other attempts to present biotechnology are written in

a flowery manner with little substance. The author holds one of the first PhDs granted in both biosciences and bioengineering. He is more than an author enamoured with the wow-factor associated with biotechnology; he is a practicing researcher in gene therapy, cell/tissue engineering, and other areas and has been involved with emerging technologies for over a decade. Having made the assertion that there is no acceptable text for teaching a course to introduce biotechnology to both scientists and engineers, the author committed himself to resolving the issue by writing his own. The book is of interest to a wide audience because it includes the necessary background for understanding how a technology works. Engineering principles are addressed, but in such a way that an instructor can skip the sections without hurting course content. The author has been involved with many biotechnologies through his own direct research experiences. The text is more than a compendium of information - it is an integrated work written by an author who has experienced first-hand the nuances associated with many of the major biotechnologies of general interest today.

This book challenges the orthodox approach to the teaching of second language listening, which is based upon the asking and answering of comprehension questions. The book's central argument is that a preoccupation with the notion of 'comprehension' has led teachers to focus upon the product of listening, in the form of answers to questions, ignoring the listening process itself. The author provides an informed account of the psychological processes which make up the skill of listening, and analyses the characteristics of the speech signal from which listeners have to construct a message. Drawing upon this information, the book proposes a radical alternative to the comprehension approach and provides for intensive small-scale practice in aspects of listening that are perceptually or cognitively demanding for the learner. Listening in the Language Classroom was winner of the Ben Warren International Trust House Prize in 2008.

It can be very frustrating when you cannot communicate with French people and trivial things can be a cause of major annoyance, especially when you cannot explain yourself using French. What can you do to improve this situation? The best way to improve your French is reading a book from which you can learn realistic French conversations. This book is designed to learn French conversations, it contains: 100 French short stories for beginners and intermediate students and allows new French speakers to hone their reading skills and learn typical expressions used in daily life. This book is focused on realistic dialogue and is an excellent source to study the language, expand your vocabulary and have fun while learning French! Each story comes with an introduction in French. The French conversation is followed by an English line to line translation, a key-vocabulary section, and short learning questions. The next 30 short stories are for intermediate students and those who are interested in reading good short stories with entertaining content. The last 20 short stories tend to be longer and are not necessarily for learners who want to learn conversations, but for those who appreciate humorous stories in French and students who need to focus on grammar and the structure of the language. An authorised reissue of the long out of print classic textbook, *Advanced Calculus* by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention *Differential and Integral Calculus* by R Courant, *Calculus* by T Apostol, *Calculus* by M Spivak, and *Pure Mathematics* by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

Arabic-English-Arabic Legal Translation provides a groundbreaking investigation of the issues found in legal translation between Arabic and English. Drawing on a contrastive-comparative approach, it analyses parallel authentic legal documents in both Arabic and English to examine the features of legal discourse in both languages and uncover the different translation techniques used. In so doing, it addresses the following questions: What are the features of English and Arabic legal texts? What are the similarities and differences of English and Arabic legal texts? What are the difficult areas of legal translation between English and Arabic legal texts? What are the techniques for translating these difficult areas on the lexical and syntactic levels? Features include: A thorough description of the features of legal translation in both English and Arabic, drawing on empirical new research, corpus data analysis and strategic two-way comparisons between source texts and target texts Coverage of a broad range of topics including an outline of the chosen framework for data analysis, a historical survey of legal discourse developments in both Arabic and English and detailed

analyses of legal literature at both the lexical and syntactic levels Attention to common areas of difficulty such as Shariah Law terms, archaic terms and modal auxiliaries Many examples and excerpts from a wide selection of authentic legal documents, reinforced by practical discussion points, exercises and practice drills to encourage active engagement with the material and opportunities for hands-on learning. Wide-ranging, scholarly and thought-provoking, this will be a valuable resource for advanced undergraduates and postgraduates on Arabic, Translation Studies and Comparative Linguistics courses. It will also be essential reading for translation professionals and researchers working in the field.
