This classroom-tested
textbook is an
introduction to
probability theory, with
the right balance
between mathematical
precision, probabilistic
intuition, and concrete
applications.

Introduction to
Probability covers the
material precisely,
while avoiding
excessive technical
details. After
introducing the basic
vocabulary of
randomness, including
events, probabilities,
and random variables,
the text offers the
reader a first glimpse
of the major theorems
of the subject: the law

of large numbers and
the central limit
theorem. The
important probability
distributions are
introduced organically
as they arise from
applications. The
discrete and
continuous sides of
probability are treated
together to emphasize
their similarities.

Intended for students
with a calculus
background, the text
teaches not only the
nuts and bolts of
probability theory and
how to solve specific
problems, but also why
the methods of
solution work.

Facebook, the Media
and Democracy
examines Facebook
Inc. and the impact
that it has had and
continues to have on
media and democracy

around the world. Drawing on interviews with Facebook users of different kinds and dialogue with politicians, regulators, civil society and media commentators, as well as detailed documentary scrutiny of legislative and regulatory proposals and Facebook's corporate statements, the book presents a comprehensive but clear overview of the current debate around Facebook and the global debate on the regulation of social media in the era of 'surveillance capitalism.' Chapters examine the business and growing institutional power of Facebook as it has unfolded over the fifteen years since its creation, the benefits and meanings that it

has provided for its users, its disruptive challenge to the contemporary media environment, its shaping of conversations, and the emerging calls for its further regulation. The book considers Facebook's alleged role in the rise of democratic movements around the world as well as its suggested role in the election of Donald Trump and the UK vote to leave the European Union. This book argues that Facebook, in some shape or form, is likely to be with us into the foreseeable future and that how we address the societal challenges that it provokes, and the economic system that underpins it, will define how human societies demonstrate their capacity to

protect and enhance democracy and ensure that no corporation can set itself above democratic institutions. This is an important research volume for academics and researchers in the areas of media studies, communications, social media and political science.

"Cambridge

International AS and A

Level Computer

Science Coursebook delivers an accessible guide to theoretical and practical skills in Computer Science, with a clear progression of tasks that help to consolidate and develop knowledge. Cambridge International AS and A Level Computer Science Coursebook offers students detailed descriptions of the concepts, reinforced with examples that outline complex subject matter in a clear way. Alongside fundamental definitions, higher level programming skills are developed through the explanation of processes and consolidated by practical exam-type questions for students to attempt."-- Publisher description.

Introduction to Probability Cicerone Press Limited
A guidebook to 40 walking routes on the Isle of Man. The varied selection of day walks, which range from 1 to 14 miles long (2 and 22km) take in the best scenic routes right across this delightful island. Many routes can be combined to create longer more ambitious walks. The Isle of Man offers the walker a wonderfully diverse range of landscapes within a relatively compact island setting, and the routes reflect this diversity - scale the highest point Snaefell (620m), cross wide-open moorlands, drift over beaches and climb coastal clifftops. The assortment provides walkers with fantastic trails, along

with detail on the wildlife, wild flowers, unique history and points of interest encountered. Alongside detailed route descriptions and OS 1:50,000 maps (blown up to 1:40,000 for greater clarity), there is plenty of practical information on getting to and around the Manx Isle and advice on making the most out of any exploration of the Isle of Man.

micron-sized polymer particles by radical polymerization (Emulsion, Miniemulsion, Microemulsion, and Dispersion Polymerizations) of vinyl monomers in environmentally friendly heterogeneous aqueous and supercritical carbon dioxide fluid media are reviewed by prominent worldwide researchers. In addition to the important challenges and possibilities with regards to design and preparation of functionalized polymer particles of controlled size, the topics described are of great current interest due to the increased awareness of environmental issues.

A guidebook to 40 circular walks in two of Lancashire's largest Areas of Outstanding Natural Beauty - the Forest of Bowland, an area of 310 square miles, and the 'bewitching' countryside of Pendle to the south. The walks range between 3 and 12.5 miles in length and are all illustrated with extracts of OS mapping. The diverse range of routes include four Marilyns - Ward's Stone, Pendle Hill, Longridge Fell and Fair Snape Fell. The walks are spread across the region, with bases including Caton, Dunsop Bridge, Slaidburn, Clitheroe and Pendle. All the walks are punctuated with snippets of information on the natural and cultural history of the region,

from witches to wildflowers. The Forest of Bowland and Pendle provide vastly differing terrain - from the lush farmlands of the Ribble valley to the more rugged rough pastures of the Forest of Bowland uplands and the huge boggy uplifts of the main Bowland massif itself.

This landmark collective work introduces the physical, chemical, and biological principles underlying

photosynthesis: light absorption, excitation energy transfer, and charge separation. It begins with an introduction to properties of various pigments, and the pigment proteins in plant, algae, and bacterial systems. It addresses the underlying physics of light harvesting and key spectroscopic methods, including data analysis. It discusses assembly of the natural system, its energy transfer properties, and regulatory mechanisms. It also addresses light-harvesting in artificial systems and the impact of photosynthesis on our environment. The chapter authors are amongst the field's world recognized

experts. Chapters are divided into five main parts, the first focused on pigments, their properties and biosynthesis, and the second section looking at photosynthetic proteins, including light harvesting in higher plants, algae, cyanobacteria, and green bacteria. The third part turns to energy transfer and electron transport, discussing modeling approaches, quantum aspects, photoinduced electron transfer, and redox potential modulation, followed by a section on experimental spectroscopy in light harvesting research. The concluding final section includes chapters on artificial photosynthesis, with topics such as use of cyanobacteria and

algae for sustainable energy production. Robert Croce is Head of the Biophysics Group and full professor in biophysics of photosynthesis/energy at Vrije Universiteit, Amsterdam. Rienk van Grondelle is full professor at Vrije Universiteit, Amsterdam. Herbert van Amerongen is full professor of biophysics in the Department of Agrotechnology and Food Sciences at Wageningen University, where he is also director of the MicroSpectroscopy Research Facility. Ivo van Stokkum is associate professor in the Department of Physics and Astronomy, Faculty of Sciences, at Vrije Universiteit, Amsterdam.

This book highlights the concept and applications of Remanufactured Fashion. The first book on this subject, it covers reverse logistics, exemplars, and case studies of remanufactured fashion design. Textile waste is a major issue for all countries, and converting that waste into useful products offers a sensible solution.

Remanufactured Fashion is one such sustainable waste management strategy. It involves the conversion of discarded garments into useful retail products, without which they would be dumped at landfills, posing a number of environmental issues. Remanufacturing

recovers a product's inherent value once that product no longer fulfills the user's desired needs. The application and use of discarded clothing in remanufacturing processes could greatly reduce the percentage of clothing waste (and mitigate related waste management issues), while also contributing to resource conservation. There has been scant research investigating what is actually involved in the fashion remanufacturing process and how the process could be up-scaled to the mass market in order to achieve greater environmental gains. This book addresses that gap in the literature and examines all aspects pertaining to the

concept and applications of Remanufactured Fashion.
