Comprehensive and up-to-date, this handy volume provides the maximum amount of information in the least amount of space. Illustrated throughout, including maps and diagrams, this book contains 10,000 entries and 500,000 words, covering all fields of knowledge from Art and Biology to Religion and Sports. Also features biographical, geographical, and political entries.

The Planets W. W. Norton & Company
 Lonely Planet's Friuli Venezia Giulia is our most comprehensive guide that extensively covers all the region has to offer, with recommendations for both

popular and lesser-known experiences. Indulge in coffee and cuisine of Trieste, hit the slopes of Giulie Alps or laze away on the beaches of the southern coast ; all with your trusted travel companion. Inside Lonely Planet's Friuli Venezia Giulia Travel Guide: What's NEW in this edition? NEW top experiences feature - a visually inspiring collection of Friuli Venezia Giulia's best experiences and where to have them What's NEW feature taps into cultural trends and helps you find fresh ideas and cool new areas NEW Accommodation feature gathers all the information you need to plan your accommodation Highlights and itineraries help you tailor your trip to your personal needs and interests Eating & drinking in Friuli, Venezia and Giulia - we reveal the dishes and drinks you have to try Colour maps and images throughout Insider tips

to save time and money and get around like a local, avoiding crowds and trouble spots Honest reviews for all budgets - eating, sleeping, sightseeing, going out, shopping, hidden gems that most guidebooks miss Cultural insights give you a richer, more rewarding travel experience - history, people, music, landscapes, wildlife, politics Over 30 maps Covers Trieste, Carso, Friuli coast, Gorizia and the Collio, Udine, Pordenone and Western Friuli, and the mountains: the Friulian Dolomites, Carnia and the Julian Alps The Perfect Choice: Lonely Planet's Friuli Venezia Giulia, our most comprehensive guide to the region, is perfect for both exploring top sights and taking roads less travelled. information for every kind of traveller since 1973. Over the past four decades, we've printed over 145 million guidebooks and phrasebooks for 120

languages, and grown a dedicated, passionate global community of travellers. You'll also find our content online, and in mobile apps, videos, 14 languages, armchair and lifestyle books, ebooks, and more, enabling you to explore every day. 'Lonely Planet guides are, quite simply, like no other.' □ New York Times 'Lonely Planet. It's on everyone's bookshelves; it's in every traveller's hands. It's on mobile phones. It's on the Internet. It's everywhere, and it's telling entire generations of people how to travel the world.' □ Fairfax Media (Australia) *The Sun, the Moon, and the Stars* Quirk Books

Describes the planets and their relationship to each other and discusses the technology which has made it possible for human beings to explore the rest of the solar system at a closer range.

[Solidarity Economy: Building Alternatives for People and Planet](#) CRC Press

A call to action from Jane Fonda, one of the most inspiring activists of our time, urging us to wake up to the looming disaster of climate change and equipping us with the tools we need to join her in protest "This is the last possible moment in history when changing course can mean saving lives and species on an unimaginable scale. It's too late for moderation." In the fall of 2019, frustrated with the obvious inaction of politicians and inspired by Greta Thunberg, Naomi Klein, and student climate strikers, Jane Fonda moved to Washington, D.C., to lead weekly climate change demonstrations on Capitol Hill. On October 11, she launched Fire Drill Fridays, and has since led thousands of people in nonviolent civil disobedience, risking arrest to protest for action. In *What Can I Do?*, Fonda weaves her deeply personal journey as an activist alongside conversations with and speeches by leading climate scientists and inspiring community organizers, and dives deep into the issues, such as water, migration, and human rights, to emphasize what is at stake. Most significantly, Fonda equips us all with the tools we need to join her in protest, so that everyone can work to combat the climate crisis. No stranger to protest, Fonda's life has been famously shaped by activism. And now she is once again galvanizing the public to take to the streets. Many are already aware of the looming disaster of climate change and realize that a moral responsibility rests on our shoulders. In 2019, we saw atmospheric concentrations of greenhouse gases hit the highest level ever recorded in human history, and our window of opportunity to act is quickly closing. We are facing a climate crisis, but we're also

facing an empathy crisis and an inequality crisis; the surge of protests over police violence against black Americans has once again highlighted the links between racism and environmental degradation in our country. It isn't only earth's life-support systems that are unraveling. So too is our social fabric. This is going to take an all-out war on drilling and fracking and deregulation and racism and misogyny and colonialism and despair all at the same time. As Annie Leonard, executive director of Greenpeace USA and Fonda's partner in developing Fire Drill Fridays, has declared, "Change is inevitable; by design, or by disaster." Together, we can commandeer change for the positive--but it will require collective actions taken by social movements on an unprecedented scale. The problems we face now require every one of us to join the fight. The fight for not only our immediate future, but for the future of generations to come. 100% of the author's net proceeds from *What Can I Do?* have gone to Greenpeace

A Most Improbable Journey: A Big History of Our Planet and Ourselves Penguin

This book critically explores answers to the big question, What produced our universe around fifteen billion years ago in a Big Bang? It critiques contemporary atheistic cosmologies, incl. Steady State, Oscillationism, Big Fizz, that affirm the eternity & self-sufficiency of the universe without God. It defends and revises Process Theology and arguments for God's existence from the universe's life-supporting order & contingent existence. [Space: Planets, Moons, Stars, and More!](#) Random House Books for Young Readers Join us on an adventure across the universe, as we rocket to the stars, marvel at mysterious planets and discover galaxies far far away. Three, two, one, blast off! From icy worlds and hot, fiery giants to the biggest telescopes and latest spacecraft, this book about space covers more than 40 profiles of the planets, stars and celestial objects. This out-of-this-world astronomy book for kids is packed with: • Age-appropriate with large pictures and clear text. • Pronunciation guide for each planet and astronomical object. • Visual index arranged by type, so stars and planets can be found quickly. • Fact files for each featured object give key information, like size, type of object and location in the universe. Tapping into children's natural curiosity about the vastness of space, this stunning encyclopedia will enchant every budding astronaut. Did you know that our Solar System is part of a galaxy called the Milky Way? Or that Saturn is the furthest planet

that can be seen from Earth without a telescope? You'll discover many fascinating facts about our neighboring planets and the latest space technology! Broken down by type, each object is presented in a clear, engaging way, with stunning images and bite-sized chunks of information. Young stargazers will be intrigued by the detailed NASA photography that brings the mysteries of outer space down to Earth! The handy pronunciation guide helps with tricky names and a visual index gives a quick overview of all the key objects in this reference book. *My Book of Stars and Planets* is the perfect gift for kids ages 5-8 who are interested in learning about the universe.

War, Big Oil and the Fight for the Planet Random House Reference

This book will blow your child's mind! Big Science explained simply The perfect picturebook to introduce little minds to big ideas! Planets combines bold, colourful illustrations with jokes and incredible science facts to take young readers on a fun-filled journey across the solar system. On the way they will learn all about the planets, and find out the answers to such important questions as: Why does Venus smell so bad? Why aren't there many birthday parties on Neptune? and What would happen if you tried to eat your dinner on Mars?

Are the Planets Inhabited? Random House Books for Young Readers

This encyclopedia has become the one indispensable reference for families, students, and businesses across North America. Unmatched in scope and authority, it has been acclaimed for its unique visual appeal and instantly accessible organization.

The Anthropocene Reviewed (Signed Edition) Spectra

The most comprehensive look at our relationship with Mars—yesterday, today, and tomorrow—through history, archival images, pop culture ephemera, and interviews with NASA scientists Mars has been a source of fascination and speculation ever since the ancient Egyptians observed its blood-red hue and named it for their god of war and plague. But it wasn't until the 19th century when "canals" were observed on the surface of the Red Planet, suggesting the presence of water, that scientists, novelists, filmmakers, and entrepreneurs became obsessed with the question of whether there's life on Mars. Since then, Mars has fully invaded pop culture, inspiring its own day of the week (Tuesday), an iconic Looney Tunes character, and many novels and movies, from Ray Bradbury's *Martian*

Chronicles to *The Martian*. It's this cultural familiarity with the fourth planet that continues to inspire advancements in Mars exploration, from NASA's launch of the Mars rover Perseverance to Elon Musk's quest to launch a manned mission to Mars through SpaceX by 2024. Perhaps, one day, we'll be able to answer the questions our ancestors asked when they looked up at the night sky millennia ago.

Only One John Wiley & Sons

"Compulsively readable." —The New York Times Book Review "Inventive and thrilling. . . . I couldn't put it down." —Brit Bennett, #1 New York Times bestselling author of *The Vanishing Half* "It's a thrill to read this novel." —Jia Tolentino, New York Times bestselling author of *Trick Mirror* The gripping story of one scientist in outer space, another who watches over him, the family left behind, and the lengths people will go to protect the people and planet they love For twenty years, Alex has believed that his gene-edited super-algae will slow and even reverse the effects of climate change. His obsession with his research has jeopardized his marriage, his relationships with his kids, and his own professional future. When the Son sisters, founders of the colossal tech company Sensus, offer him a chance to complete his research, he seizes the opportunity. The catch? His lab will be in outer space on Parallaxis, the first-ever luxury residential space station built for billionaires. Alex and six other scientists leave Earth and their loved ones to become Pioneers, the beta tenants of Parallaxis. But Parallaxis is not the space palace they were sold. Day and night, the embittered crew builds the facility under pressure from Sensus, motivated by the promise that their families will join them. At home on Earth, much of the country is ablaze in wildfires and battered by storms. In Michigan, Alex's teenage daughter, Mary Agnes, struggles through high school with the help of the ubiquitous Sensus phones implanted in everyone's ears, archiving each humiliation, and wishing she could go to Parallaxis with her father—but her mother will never allow it. The Pioneers are the beta testers of another program, too: Sensus is designing an algorithm that will predict human behavior. Katherine Son hires Tess, a young social psychologist, to watch the experiment's subjects through their phones—including not only the Pioneers, but Katherine's sister, Rachel. Tess begins to develop an intimate, obsessive relationship with her subjects. When Tess and Rachel travel to Parallaxis, the controlled experiment begins to unravel. Prescient and insightful, *A House Between Earth and the Moon* is at

once a captivating epic about the machinations of big tech and a profoundly intimate meditation on the unmistakably human bonds that hold us together.

The Wisdom of Crowds Random House Books for Young Readers

This lyrical, environmentally focused picture book showcases the unique beauty of our one and only universe--its galaxies, stars, and planets--as well as our one and only Earth and the precious life it contains. Join one girl as she leads her friends to a tree-planting ceremony. Along the way, she explains in simple language the value of the universe and Planet Earth. Readers will see the Big Bang, the Milky Way, all the planets in the solar system, as well as Earth's atmosphere, and the life within it: its oceans, trees, bugs, and seven billion human beings. Finally, the girl and her friends plant a tree--doing one small thing to help their one special planet. Both informative and inspiring, here is a beautifully written and gorgeously illustrated science picture book about our universe that will encourage young readers and listeners to protect and preserve the environment.

The Big Book of Mars HMH

Goodreads Choice winner for Nonfiction 2021 and instant #1 bestseller! A deeply moving collection of personal essays from John Green, the author of *The Fault in Our Stars* and *Turtles All the Way Down*. "The perfect book for right now." —People "The Anthropocene Reviewed is essential to the human conversation." —Library Journal, starred review *The Anthropocene* is the current geologic age, in which humans have profoundly reshaped the planet and its biodiversity. In this remarkable symphony of essays adapted and expanded from his groundbreaking podcast, bestselling author John Green reviews different facets of the human-centered planet on a five-star scale—from the QWERTY keyboard and sunsets to Canada geese and Penguins of Madagascar. Funny, complex, and rich with detail, the reviews chart the contradictions of contemporary humanity. As a species, we are both far too powerful and not nearly powerful enough, a paradox that came into sharp focus as we faced a global pandemic that both separated us and bound us together. John Green's gift for storytelling shines throughout this masterful collection. *The Anthropocene Reviewed* is an open-hearted exploration of the paths we forge and an unironic celebration of falling in love with the world. This is a signed edition.

paperback atlas available. Over 90 pages of maps depict the changing world, geographically and politically.

Big Book of Stars and Planets Lulu.com

The authors have put forth great efforts in gathering present day knowledge about different objects within our solar system and universe. This book features the most current information on the subject with information acquired from noted scientists in this area. The main objective is to convey the importance of the subject and provide detailed information on the physical makeup of our planetary system and technologies used for research. Information on educational projects has also been included in the Radio Astronomy chapters. This information is a real plus for students and educators considering a career in Planetary Science or for increasing their knowledge about our planetary system.

The Random House Book of 1001

Questions and Answers about Planet Earth Anchor

"Few are better at mixing elements of high fantasy and hard science fiction."—The New York Times Book Review The crew of shipbred technicians sent to the planet Ireta were prepared for a routine mission to catalog flora and fauna and search for new energy sources. Kai and his beautiful co-leader, Varian, the best xenob-vet in the business, followed all the standard procedures, but the result of their investigations was totally unexpected. When their rescue ship mysteriously disappears, they suddenly find themselves surrounded by giant swamp creatures, deadly predators, and terrifying dinosaurs. And a curious change begins to come over many of the crew members—a mutinous change that will lead all of them, in one way or another, into the primitive darkness of a future world that holds many mysteries yet to be revealed. . . .

Puffin Little Scientist: The Solar System Penguin

The emergence of the global grassroots economic structural reform movement known as the Solidarity Economy. This book contain the core papers, discussion and debates on the topic at the U.S. Social Forum of 10,000 people in Atlanta in the summer of 2007.

How to Build a Habitable Planet

Random House Books for Young Readers "This quietly profound book belongs on the shelf next to Jon Krakauer's *Into the Wild*." —The New York Times The riveting true story of Dick Conant, an American folk hero who, over the course of more than twenty years, canoed solo thousands of miles of American rivers—and then disappeared near the Outer Banks of North

Carolina. This book “contains everything: adventure, mystery, travelogue, and unforgettable characters” (David Grann, best-selling author of *Killers of the Flower Moon*). For decades, Dick Conant paddled the rivers of America, covering the Mississippi, Yellowstone, Ohio, Hudson, as well as innumerable smaller tributaries. These solo excursions were epic feats of planning, perseverance, and physical courage. At the same time, Conant collected people wherever he went, creating a vast network of friends and acquaintances who would forever remember this brilliant and charming man even after a single meeting. Ben McGrath, a staff writer at *The New Yorker*, was one of those people. In 2014 he met Conant by chance just north of New York City as Conant paddled down the Hudson, headed for Florida. McGrath wrote a widely read article about their encounter, and when Conant's canoe washed up a few months later, without any sign of his body, McGrath set out to find the people whose lives Conant had touched—to capture a remarkable life lived far outside the staid confines of modern existence. *Riverman* is a moving portrait of a complex and fascinating man who was as troubled as he was charismatic, who struggled with mental illness and self-doubt, and was ultimately unable to fashion a stable life for himself; who traveled alone and yet thrived on connection and brought countless people together in his wake. It is also a portrait of an America we rarely see: a nation of unconventional characters, small river towns, and long-forgotten waterways.

The Planets Pushkin Children's Books
Curiosities and wonders about planet Earth, including its formation, history, physical features, climate, volcanoes, earthquakes, deserts, ice caps, pollution, oceans, atmosphere, vegetation, and resources.

The Sun, Stars, and Planets Ballantine Books
Since its first publication more than twenty-five years ago, *How to Build a Habitable Planet* has established a legendary reputation as an accessible yet scientifically impeccable introduction to the origin and evolution of Earth, from the Big Bang through the rise of human

civilization. This classic account of how our habitable planet was assembled from the stuff of stars introduced readers to planetary, Earth, and climate science by way of a fascinating narrative. Now this great book has been made even better. Harvard geochemist Charles Langmuir has worked closely with the original author, Wally Broecker, one of the world's leading Earth scientists, to revise and expand the book for a new generation of readers for whom active planetary stewardship is becoming imperative. Interweaving physics, astronomy, chemistry, geology, and biology, this sweeping account tells Earth's complete story, from the synthesis of chemical elements in stars, to the formation of the Solar System, to the evolution of a habitable climate on Earth, to the origin of life and humankind. The book also addresses the search for other habitable worlds in the Milky Way and contemplates whether Earth will remain habitable as our influence on global climate grows. It concludes by considering the ways in which humankind can sustain Earth's habitability and perhaps even participate in further planetary evolution. Like no other book, *How to Build a Habitable Planet* provides an understanding of Earth in its broadest context, as well as a greater appreciation of its possibly rare ability to sustain life over geologic time. Leading schools that have ordered, recommended for reading, or adopted this book for course use: Arizona State University Brooklyn College CUNY Columbia University Cornell University ETH Zurich Georgia Institute of Technology Harvard University Johns Hopkins University Luther College Northwestern University Ohio State University Oxford Brookes University Pan American University Rutgers University State University of New York at Binghamton Texas A&M University Trinity College Dublin University of Bristol University of California-Los Angeles University of Cambridge University Of Chicago University of Colorado at Boulder University of Glasgow University of Leicester University of Maine, Farmington University of Michigan University of North Carolina at Chapel Hill University of North Georgia University of Nottingham

What Can I Do? Anne Schwartz Books

“Thoughtful, informative, and darkly entertaining. It's the best treatment of this important (and scary) topic you can find.” —Elizabeth Kolbert
Right now, a group of scientists is working on ways to minimize the catastrophic impact of global warming. But they're not designing hybrids or fuel cells or wind turbines. They're trying to lower the temperature of the entire planet. And they're doing it with huge contraptions that suck CO₂ from the air, machines that brighten clouds and deflect sunlight away from the earth, even artificial volcanoes that spray heat-reflecting particles into the atmosphere. This is the radical and controversial world of geoengineering, which only five years ago was considered to be “fringe.” But as Jeff Goodell points out, the economic crisis, combined with global political realities, is making these ideas look sane, even inspired. Goodell himself started out as a skeptic, concerned about tinkering with the planet's thermostat. We can't even predict next week's weather, so how are we going to change the temperature of whole regions? What if a wealthy entrepreneur shoots particles into the stratosphere on his own? Who gets blamed if something goes terribly wrong? And perhaps most disturbing, what about wars waged with climate control as the primary weapon? There are certainly risks, but Goodell believes the alternatives could be worse. In the end, he persuades us that geoengineering may just be our last best hope—a Plan B for the environment. His compelling tale of scientific hubris and technical daring is sure to jump-start the next big debate about the future of life on earth. “Goodell explores with infectious curiosity and thoughtful narration this strange, promising, and untested suite of climate fixes.” —*BusinessWeek*
“A quick, enjoyable read through a complex, timely topic. And after you read it, you'll never look at the sky or the ocean—or Earth, really—in quite the same way again.” —*The Christian Science Monitor*
